Indiana University Health

Fighting antimicrobial resistance from the palm of your hand

Antimicrobial resistance (AMR) impacts the people we love and care for in our communities. It is directly responsible for over 1 million annual deaths worldwide, and the WHO labels it a top global health threat. IU Health is putting antimicrobial stewardship in the hands of every provider to achieve better outcomes for all Hoosiers. It will take a unified effort to curb the spread of drug-resistant infections.

As a prescriber of antibiotics, you play a critical role.

Meet Firstline: A smarter way to take action on AMR

Firstline empowers providers to make better treatment decisions by providing fast access to local infectious disease guidance and antimicrobial dosing information at the point of care.

- Make better decisions to deliver better patient outcomes
- Reduce the burden of drug-resistant infections on our health system
- Minimize adverse events, HAIs, and long-term complications associated with unnecessary antibiotic use
- Receive instant notifications on drug shortages and updated guidance
- Save consults for complicated cases

Get started with Firstline in less than 60 seconds

1. Download on mobile or access on the web
2. Click ‘Select Location’ and choose **Indiana University Health**
3. Instantly access local, tailored guidance to optimize patient outcomes and combat the spread of AMR
